

STUDENT NETWORKING PLATFORM

A framework

Student joins platform and inputs their details e.g. website, school, department, grades, interests, skills, papers, and projects (curricular and extracurricular)

Student's details are automatically shared continuously on their profile (based on scrapped and manually imputed data)

"Mentors" in similar fields are "paired" with students via suggestions based on field of study/practice, interests, etc

Mentors, Organisations and bodies interested contact students for internship, or other opportunities

Students find better jobs and are independent even before they leave the university. Basically LinkedIn, but for students
